Washington, DC 20500

September 17, 2009

Mr. President,

I am writing you again to inform you as of September 14, 2009 EnCana has pulled my water supply out. This leaves us with no water to heat our house, bathe, wash dishes, clothes and use in the bathroom. EnCana put this water supply in for us so they could clean up our water well. In mediation they said they could clean it up, but when they could not do it. They called the mediator and had them pull the water out. We had contacted the mediator several times asking him for help. He would not help us but he did help them to get the water pulled out.

Mr. President we have no water in our house to use. Now the old well that was tested by the EPA and found to be contaminated, the CDC have told us not to drink our water or put it back in our house because of the contamination. We cannot drill new water well.

Mr. President we need your help to make our state agencies help the EPA with this big problem we have here. There is 11 wells right here that are contaminated. These families also can not drink their water. We need a complete disclosure of chemicals and product that EnCana is using when they frac their gas wells. We have people that are sick and animals that have died.

Mr. President please help Wyoming get a grip on this problem before it's too late.
Thank you so much for your time.

Sincerely,

Louis Meeks
